

OLAV THON GRUPPEN

# Energi & klimaregnskap 2021

---

## Olav Thon Gruppen

Hensikten med denne rapporten er å vise oversikten over organisasjonens klimagassutslipp (GHG-utslipp), som en integrert del av en overordnet klimastrategi. Et klimaregnskap er et viktig verktøy i arbeidet med å identifisere konkrete tiltak for å redusere sitt energiforbruk og tilhørende GHG-utslipp. Denne årlige rapporten gjør organisasjonen i stand til å måle nøkkeltall og dermed evaluere seg selv over tid.

Rapporten omfatter Olav Thon Gruppens virksomheter.

Informasjonen som benyttes i et klimaregnskap stammer både fra eksterne og interne kilder, og blir omregnet til tonn CO<sub>2</sub>-ekvivalenter. Analysen er basert på den internasjonale standarden "A Corporate Accounting and Reporting Standard", som er utviklet av "the Greenhouse Gas Protocol Initiative" - GHG protokollen. Dette er den mest anvendte metoden verden over for å måle sine utslipp av klimagasser. ISO standard 14064-1 er basert på denne.

---

## Reporting Year Energy and GHG Emissions

Utslippskilde	Forklaring	Forbruk	Enhet	Energi (MWh)	Utslipp tCO <sub>2</sub> e	Utslippsandel

## Metodikk og kilder

GHG-protokollen er utviklet av «World Resources Institute» (WRI) og «World Business Council for Sustainable Development» (WBCSD). Analysen i denne rapporten er utført iht. "A Corporate Accounting and Reporting Standard Revised edition", én av fire regnskapsstandarder under GHG-protokollen. Standarden omfatter følgende klimagasser, som omregnes til CO<sub>2</sub>-ekvivalenter: CO<sub>2</sub>, CH<sub>4</sub> (metan), N<sub>2</sub>O (lystgass), SF<sub>6</sub>, NF<sub>3</sub>, HFK og PFK gasser.

Denne analysen er basert på operasjonell kontroll aspektet, som dermed definerer hva som skal inngå i klimaregnskapet av en organisasjons driftsmidler, så vel som fordeling mellom de ulike scopene. I metoden skilles det mellom operasjonell kontroll og finansiell kontroll. Hvis operasjonell kontrollmetoden benyttes så inkluderes utslippskilder som organisasjonen fysisk kontrollerer, men ikke nødvendigvis eier. Man rapporterer dermed heller ikke over utslippskilder som man eier, men ikke har kontroll (f.eks. det er leietaker som rapporterer strømforbruket i scope 2, ikke utleier).

Klimaregnskapet er inndelt i tre nivåer (scopes) som består av både direkte og indirekte utslippskilder.

Scope 1 Obligatorisk rapportering inkluderer alle utslippskilder knyttet til driftsmidler der organisasjonen har operasjonell kontroll. Dette inkluderer all bruk av fossilt brensel for stasjonær bruk eller transportbehov (egeneide, leiede eller leasede kjøretøy, oljekjeler etc.). Videre inkluderes eventuelle direkte prosessutslipp (av de seks klimagassene).

Scope 2 Obligatorisk rapportering av indirekte utslipp knyttet til innkjøpt energi; elektrisitet eller fjernvarme/-kjøling. Dette gjelder f.eks. for bygg som man leier og ikke nødvendigvis eier. Utslippsfaktorene som benyttes i CEMAsys for elektrisitet er basert på nasjonale brutto produksjonsmikser fra International Energy Agency's statistikk (IEA Stat). Den nordiske miksfaktoren dekker produksjonen i Sverige, Finland, Norge og Danmark og reflekterer det felles nordiske markedsområdet (Nord Pool Spot). I forhold til utslippsfaktorer på fjernvarme benyttes enten faktisk produksjonsmikser basert på innhentet informasjon fra den enkelte produsent, eller gjennomsnittsmikser basert på IEA statistikk (se kildehenvisning).

I januar 2015 ble GHG Protokollens (2015) nye retningslinjer for beregning av utslipp fra elektrisitetsforbruk publisert. Her åpnes det for todelt rapportering av elektrisitetsforbruk.

I praksis betyr det at virksomheter som rapporterer sine klimagassutslipp skal synliggjøre både reelle klimagassutslipp som stammer fra produksjonen av elektrisitet, og de markedsbaserte utslippene knyttet til kjøp av opprinnelsesgarantier. Hensikten med denne endringen er på den ene siden å vise effekten av energieffektivisering og sparetiltak (fysisk), og på den annen siden å vise effekten av å inngå kjøp av fornybar elektrisitet gjennom opprinnelsesgaranti (markert). Dermed belyses effekten av samtlige tiltak som en virksomhet kan gjennomføre knyttet til forbruk av elektrisitet.

Fysisk perspektiv (lokasjonsbasert metode): Denne utslippsfaktoren er basert på faktiske utslipp knyttet til elektrisitetsproduksjon innenfor et spesifikt område. Innenfor dette området er det ulike energiprodusenter som benytter en mikser av energibærere, der de fossile energibærerne (kull, gass, olje) medfører direkte utslipp av klimagasser. Disse klimagassene reflekteres gjennom utslippsfaktoren og fordeles dermed til hver enkelt forbruker.

Markedsbasert perspektiv: Beregningen av utslippsfaktor baseres på om virksomheten velger å kjøpe opprinnelsesgarantier eller ikke. Ved kjøp av opprinnelsesgarantier dokumenterer leverandøren at kjøp av elektrisitet kommer fra kun fornybare kilder, som gir en utslippsfaktor på 0 gram CO<sub>2</sub>e per kWh.

Elektrisitet som ikke er knyttet til opprinnelsesgarantier får en utslippsfaktor basert på produksjonen som er igjen etter at opprinnelsesgarantiene for fornybar andel er solgt. Dette kalles *residual mikser*, og er normalt signifikant høyere enn den lokasjonsbaserte faktoren.

Scope 3 Frivillig rapportering av indirekte utslipp knyttet til innkjøpte varer eller tjenester. Dette er utslipp som indirekte kan knyttes til organisasjonens aktiviteter, men som foregår utenfor deres kontroll (derav indirekte). Typisk scope 3 rapportering vil inkludere flyreiser, logistikk/transport av varer, avfall, forbruk av

ulike råstoff etc.

Generelt bør et klimaregnskap inkludere nok relevant informasjon slik at det kan brukes som beslutningsstøtteverktøy for virksomhetens ledelse. For å få til dette er det viktig å inkludere de elementer som har økonomisk relevans og tyngde, og som det er mulig å gjøre noe med.
